

I am an orthopaedic surgeon with over 15 years of experience specializing in foot and ankle surgery, musculoskeletal infections and trauma. My primary research interests include investigating innovative surgical techniques, biomarker development for orthopaedic infections, and enhancing diagnosis and management of various foot and ankle pathologies. As the division chief of the Foot and Ankle division at the Orthopaedic Department of the Yale School of Medicine, I have contributed to advancing the field through research, mentorship and clinical care. I have actively participated in AOFAS, including serving as chair for the Education Committee.

Irvin Oh, MD, FAOA
